# Artificial Intelligence Recap

Mausam

What is intelligence?

- (bounded) Rationality
  - We have a performance measure to optimize
  - Given our state of knowledge
  - Choose optimal action
  - Given limited computational resources

- Human-like intelligence/behavior

Simple reflex agents

# Reflex agent with internal state

What world *was* like

How world evolves

Condition/Action rules

Sensors

what world is like now

what action should I do now?

AGENT

Effectors

ENVIRONMENT

Goal-based agents

Utility-based agents

Learning agents

Search in Discrete State Spaces

- This is different from Web Search ☺
- Every discrete problem can be cast as a search problem.
- (states, actions, transitions, cost, goal-test)
- Types
  - uninformed systematic: often slow
   - DFS, BFS, uniform-cost, iterative deepening
  - Heuristic-guided: better
    - Greedy best first, A*
    - relaxation leads to heuristics
  - Local: fast, fewer guarantees; often local optimal
    - Hill climbing and variations
    - Simulated Annealing: global optimal
    - Genetic algorithms: somewhat non-local due to crossing over
  - (Local) Beam Search

Search Example: Game Playing

- Game Playing
  - AND/OR search space (max, min)
  - minimax objective function
  - minimax algorithm (~dfs)
    - alpha-beta pruning
  - Utility function for partial search
    - Learning utility functions by playing with itself
  - Openings/Endgame databases
    - Secondary search/Quiescence search

Knowledge Representation and Reasoning

- Representing: what I know

- Reasoning: what I can infer

- Logic

- PDDL

- Bayes Nets

KR&R Example: Propositional Logic

- **Representation:** Propositional Logic Formula
  - CNF, Horn Clause,…

- **Reasoning:** Deduction
  - Forward Chaining
  - Resolution

- Model Finding
  - Enumeration
  - SAT Solving

# Search+KR&R Example: SAT Solving

- Representation: CNF Formula
- Reasoning
  - pure literals; unit clauses; unit propagation
- Search
  - DPLL (~ backtracking search)
    - MOM's heuristic
  - Local: GSAT, WalkSAT
- Advances
  - Clause Learning: learning from mistakes
  - Restarts in systematic search
  - Portfolio of SAT solvers; Parameter tuning

- Phase Transitions in SAT problems
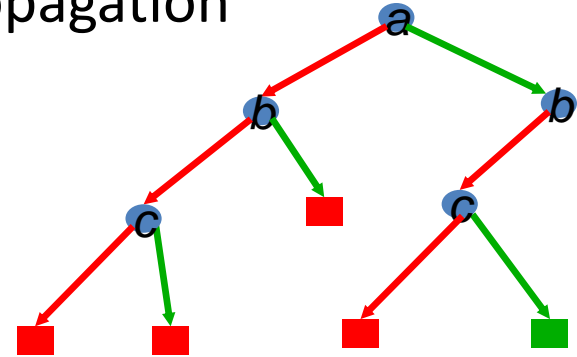

Search+KR&R Example: Planning

- **Representation:** STRIPS
- **Reasoning:** Planning Graph
  - Polynomial data structure
  - reasons about constraints on plans (mutual exclusion)
- **Search**
  - Forward: state space search
    - planning graph based heuristic
  - Backward: subgoal space search
  - Local: FF (enforced hill climbing)
- Planning as SAT: SATPlan
KR&R: Probability

- Representation: Bayesian Networks
  - encode probability distributions compactly
    - by exploiting conditional independences
- Reasoning
  - Exact inference: var elimination
  - Approx inference: sampling based methods
    - rejection sampling, likelihood weighting, Gibbs sampling

KR&R: One-step Decision Theory

- ## Representation
  - actions, probabilistic outcomes, rewards
- ## Reasoning
  - expected value/regret of action

Actions	States of Nature	
	Favorable Market	Unfavorable Market
Large plant	$200,000	-$180,000
Small plant	$100,000	-$20,000
No plant	$0	$0

  - Expected value of perfect information

- ## Non-deterministic uncertainty
  - Maximax, maximin, eq likelihood, minimax regret..

- ## Utility theory: value of money…
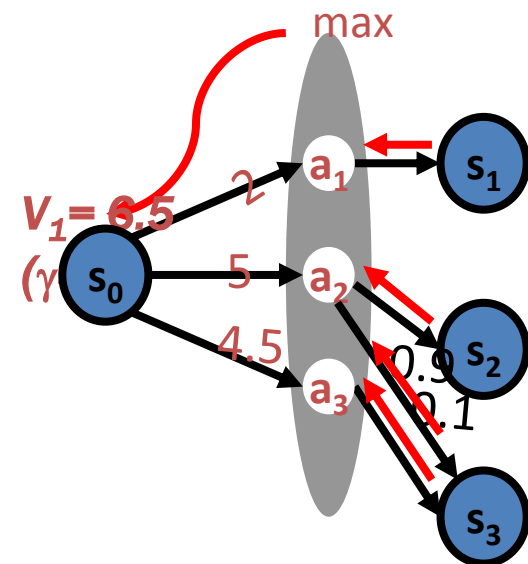

KR&R: Markov Decision Process

- ## Representation
  - states, actions, probabilistic outcomes, rewards
  - ~AND/OR Graph (sum, max)

- ## Reasoning: V*(s)
  - Value Iteration: search thru value space
  - Policy Iteration: search thru policy space

- ## State space search
  - LAO* (AND/OR version of A*)

Learning: BNs/NB

- ML estimation. max $P(D|\theta)$
  - counting; smoothing
- MAP estimation max $P(\theta|D)$..
- Hidden data
  - Expectation Maximization (EM) {local search}

- Structure learning (BN)
  - Local search thru structure space
  - Trade off structure complexity and data likelihood

Learning: Reinforcement Learning

- Learn model while taking actions

- What to learn
  - T and R: model based
  - Policy: Model free

- Which actions to take
  - Exploration - Exploitation

Popular Themes

- Weak AI vs. Strong AI

- Syntax vs. Semantics

- Logic vs. Probability

Weak AI vs. Strong AI

- Weak – general methods
  - primarily for problem solving
  - A*, CSP, Bayes Nets, MDPs…

- Strong -- knowledge intensive
  - more knowledge $\Rightarrow$ less computation
  - achieve better performance in specific tasks
  - POS tagging, Chess, Jeopardy

Syntax vs. Semantics

- Syntax: what can I say
  - Sentence in English
  - Logic formula in Prop logic
  - CPT in BN

- Semantics: what does it mean
  - meaning that we understand
  - A ^ B: both A and B are true
  - Conditional independence …

Logic vs. Probability

- Discrete || Continuous
- Hill climbing || Gradient ascent

- SAT solving || BN inference
- Tree structured CSP || Polytree Bayes nets
- Cutset || Cutset

- Classical Planning|| Factored MDP
- Bellman Ford || Value Iteration
- A* || LAO*

Advanced Ideas in AI

- Factoring state/actions…
- Hierarchical decomposition
  - Hierarchy of actions
- Sampling based approaches
  - Sampling in systematic search
  - Markov Chain Monte Carlo
  - UCT algorithm: game playing
  - Particle filters: belief tracking in robotics
- Context sensitive independence
  - Cutsets
  - Backbones in logic
- Combining probability and logic
  - Markov Logic Networks, Probabilistic Relational Models

AI we didn't cover

- Temporal models: HMMs, Kalman filters…
- Ontologies
- Robotics
- Vision
- Mechanism design
- Multi-agent systems
- Sensor Networks
- Computational Neuroscience
- …

AI is about problems.

- It is an application-driven field

- Happy to beg, borrow, steal ideas from anywhere

- Traditionally discrete … more and more cont.
- Traditionally logic… almost all probability
  - Recent close connections with EE/Stat due to ML

- HUGE field

Applications of AI

- Mars rover: planning
- Jeopardy: NLP, info retrieval, machine learning
- Puzzles: search, CSP, logic
- Chess: search
- Web search: IR
- Text categorization: machine learning

- Self-driving cars: robotics, prob. reasoning, ML…

Ethics of Artificial Intelligence

- Robots
  - Robot Rights
  - Three Laws of Robotics
- AI replacing people jobs
  - Any different from industrial revolution?
- Ethical use of technology
  - Dynamite vs. Speech understanding
- Privacy concerns
  - Humans/Machines reading freely available data on Web
  - Gmail reading our news
- AI for developing countries/improving humanity

AI-Centric World ☺
