## Greedy Algorithms: Minimum Spanning Tree (MST)

# Greedy Algorithms

## Minimum Spanning Tree

- Spanning Tree: Given a strongly connected graph  $G = (V, E)$ , a *spanning tree* of  $G$  is a subgraph  $G' = (V, E')$  such that  $G'$  is a tree.
- Minimum Spanning Tree (MST): Given a strongly connected weighted graph  $G = (V, E)$ , a *Minimum Spanning Tree* of  $G$  is a spanning tree of  $G$  of minimum total weight (i.e., sum of weight of edges in the tree).

# Greedy Algorithms

## Minimum Spanning Tree

### Problem

Given a weighted graph  $G$  where all the edge weights are distinct, give an algorithm for finding the MST of  $G$ .

# Greedy Algorithms

## Minimum Spanning Tree

### Theorem

Cut property: Given a weighted graph  $G = (V, E)$  where all the edge weights are distinct. Consider a non-empty proper subset  $S$  of  $V$  and  $S' = V \setminus S$ . Let  $e$  be the least weighted edge between any pair of vertices  $(u, v)$ , where  $u$  is in  $S$  and  $v$  is in  $S'$ . Then  $e$  is necessarily present in *all* MSTs of  $G$ .

# Greedy Algorithms

## Minimum Spanning Tree

### Algorithm

#### Prim's Algorithm( $G$ )

- $S \leftarrow \{u\}$  //  $u$  is an arbitrary vertex in the graph
- $T \leftarrow \{\}$
- While  $S$  does not contain all vertices
  - Let  $e = (v, w)$  be the minimum weight edge between  $S$  and  $V \setminus S$
  - $T \leftarrow T \cup \{e\}$
  - $S \leftarrow S \cup \{w\}$

### Algorithm

#### Kruskal's Algorithm( $G$ )

- $S \leftarrow E; T \leftarrow \{\}$
- While the edge set  $T$  does not connect all the vertices
  - Let  $e$  be the minimum weight edge in the set  $S$
  - If  $e$  does not create a cycle in  $T$ 
    - $T \leftarrow T \cup \{e\}$
  - $S \leftarrow S \setminus \{e\}$
