# CS105L: Discrete Structures I semester, 2005-06 

Homework \# 8
Due before class on Tuesday, November 8, 2005
Instructor: Amitabha Bagchi
October 27, 2005

1. Find a set $S$ for Theorem 2.2.3 when $G$ is a forest.
2. Show that a graph $G$ contains $k$ independent edges (i.e. edges which share no vertex) if and only if $q(G \backslash S) \leq|S|+|G|-2 k$ for all sets $S \subseteq G$.
3. Using only Theorem 2.2 .3 , show that a $k$-connected graph with at least $2 k$ vertices contains a matching of size $k$. Is this the best possible?
