

- Always try to give algorithm with best possible running time. The points that you obtain will depend on the running time of your algorithm. For example, a student who gives an  $O(n)$  algorithm will receive more points than a student who gives an  $O(n^2)$  algorithm.
  
- **Use of unfair means will be severely penalized.**

There are 3 questions for a total of 50 points.

---

- (15) 1. Given integers  $a_1, \dots, a_n$ , design an algorithm that determines whether there exists a partition of the set  $\{1, \dots, n\}$  into 3 disjoint subsets  $P, Q$ , and  $R$  such that

$$\sum_{i \in P} a_i = \sum_{j \in Q} a_j = \sum_{k \in R} a_k.$$

Discuss running time of your algorithm.

- (15) 2. Given positive integers  $n$  and  $W$ , design an algorithm that finds the number of  $n$  element sets  $\{x_1, \dots, x_n\}$  such that  $\sum_i x_i^2 = W$  and all  $x_i$ 's are integers. Discuss running time of your algorithm.

- (20) 3. You are given a string  $S$  of alphabets containing  $n$  alphabets. Let  $S[i]$  denote the  $i^{th}$  alphabet of the string  $S$  and let  $S[1, i]$  denote the substring  $S[1] \dots S[i]$ . Design an algorithm that computes the following:

For each  $i$ , the length of the longest *proper* prefix of  $S[1, i]$  that is also a suffix of  $S[1, i]$ .

Discuss running time of your algorithm.

<b>a</b>	<b>b</b>	<b>a</b>	<b>a</b>	<b>b</b>	<b>a</b>	<b>b</b>	<b>b</b>	<b>a</b>	<b>b</b>
0	0	1	1	2	3	2	0	1	2

Figure 1: Example string with 10 alphabets. The integer below the  $i^{th}$  alphabet denotes the length of the longest proper prefix of  $S[1, i]$  that is also a suffix of  $S[1, i]$ .
