# Computational Intractability

# Computational Intractability

NP, NP-hard, NP-complete

## Definition (NP)

A problem is said to be in NP iff there exists an efficient certification algorithm for the problem.

## Definition (P)

A problem is said to be in P iff there exists an efficient algorithm that solves the problem.

## Definition (NP-complete)

A problem  $X$  is said to be NP-complete iff the following two properties hold:

- 1  $X \in \text{NP}$ .
- 2 For all  $Y \in \text{NP}$ ,  $Y \leq_p X$ .

## Theorem (Cook-Levin Theorem)

3-SAT is NP-complete.

# Computational Intractability

NP, NP-hard, NP-complete

## Definition (NP-complete)

A problem  $X$  is said to be NP-complete iff the following two properties hold:

- 1  $X \in \text{NP}$ .
- 2 For all  $Y \in \text{NP}$ ,  $Y \leq_p X$ .

## Theorem (Cook-Levin Theorem)

*3-SAT is NP-complete.*

## Proof sketch

- Claim 1: CIRCUIT-SAT is NP-complete.
- Claim 2: CIRCUIT-SAT  $\leq_p$  3-SAT.

# Computational Intractability

NP, NP-hard, NP-complete

Theorem (Cook-Levin Theorem)

3-SAT is NP-complete.

Proof sketch

- Claim 1: CIRCUIT-SAT is NP-complete.
  - Claim 2: CIRCUIT-SAT  $\leq_p$  3-SAT.
- Circuit: A directed acyclic graph where each node is either:
- Constant nodes: Labeled 0/1
  - Input nodes: These denote the variables
  - Gates: AND, OR, and NOT

There is a single output node.

# Computational Intractability

NP, NP-hard, NP-complete

## Theorem (Cook-Levin Theorem)

*3-SAT is NP-complete.*

## Proof sketch

- Claim 1: CIRCUIT-SAT is NP-complete.
- Claim 2: CIRCUIT-SAT  $\leq_p$  3-SAT.
- Circuit: A directed acyclic graph where each node is either:
  - Constant nodes: Labeled 0/1
  - Input nodes: These denote the variables
  - Gates: AND, OR, and NOTThere is a single output node.

## Problem

CIRCUIT-SAT: Given a circuit, determine if there is an input such that the output of the circuit is 1.

# Computational Intractability

NP, NP-hard, NP-complete

## Theorem (Cook-Levin Theorem)

3-SAT is NP-complete.

## Proof sketch

- Claim 1: CIRCUIT-SAT is NP-complete.
  - Fact: For every algorithm that runs in time polynomial in the input size  $n$ , there is an equivalent circuit of size polynomial in  $n$ .
- Claim 2: CIRCUIT-SAT  $\leq_p$  3-SAT.
- Circuit: A directed acyclic graph where each node is either:
  - Constant nodes: Labeled 0/1
  - Input nodes: These denote the variables
  - Gates: AND, OR, and NOT

There is a single output node.

## Problem

CIRCUIT-SAT: Given a circuit, determine if there is an input such that the output of the circuit is 1.

# Computational Intractability

NP, NP-hard, NP-complete

## Theorem (Cook-Levin Theorem)

*3-SAT is NP-complete.*

## Proof sketch

- Claim 1: CIRCUIT-SAT is NP-complete.
  - Fact: For every algorithm that runs in time polynomial in the input size  $n$ , there is an equivalent circuit of size polynomial in  $n$ .
  - Given an input instance  $s$  of any NP problem  $X$ , consider the equivalent circuit for the efficient certifier of  $X$ . The input gates of this circuit has  $s$  and  $t$ .
    - $s \in X$  if and only if this circuit is satisfiable.
- Claim 2: CIRCUIT-SAT  $\leq_p$  3-SAT.

## Problem

CIRCUIT-SAT: Given a circuit, determine if there is an input such that the output of the circuit is 1.

# Computational Intractability

NP, NP-hard, NP-complete

## Theorem (Cook-Levin Theorem)

*3-SAT is NP-complete.*

## Proof sketch

- Claim 1: CIRCUIT-SAT is NP-complete.
  - Fact: For every algorithm that runs in time polynomial in the input size  $n$ , there is an equivalent circuit of size polynomial in  $n$ .
  - Given an input instance  $s$  of any NP problem  $X$ , consider the equivalent circuit for the efficient certifier of  $X$ . The input gates of this circuit has  $s$  and  $t$ .
    - $s \in X$  if and only if this circuit is satisfiable.
- Claim 2: CIRCUIT-SAT  $\leq_p$  3-SAT.
  - For any circuit, we can write an equivalent 3-SAT formula.

## Problem

CIRCUIT-SAT: Given a circuit, determine if there is an input such that the output of the circuit is 1.

# Computational Intractability

NP, NP-hard, NP-complete

## Definition (NP)

A problem  $X$  is said to be in NP iff there is an efficient certifier for  $X$ .

## Definition (NP-complete)

A problem is said to be NP-complete iff the following two properties hold:

- $X \in \text{NP}$
- For all  $Y \in \text{NP}$ ,  $Y \leq_p X$

## Theorem (Cook-Levin Theorem)

*3-SAT is NP-complete.*

## Definition (NP-hard)

A problem  $X$  is said to be NP-hard iff the following property holds:

- ~~$X \in \text{NP}$~~
- For all  $Y \in \text{NP}$ ,  $Y \leq_p X$

# Computational Intractability

NP, NP-hard, NP-complete

## Theorem (Cook-Levin Theorem)

*3-SAT is NP-complete.*

- Claim 1: INDEPENDENT-SET, VERTEX-COVER, SET-COVER are also NP-complete.

## Proof of Claim 1

- These problems are in NP.
- $3\text{-SAT} \leq_p \text{INDEPENDENT-SET} \leq_p \text{VERTEX-COVER} \leq_p \text{SET-COVER}$

# Computational Intractability

TSP: Travelling Salesperson

## Problem

TSP: Given a complete, weighted, directed graph  $G$  and an integer  $k$ , determine if there is a tour in the graph of total length at most  $k$ .

- Claim 1:  $\text{TSP} \in \text{NP}$ 
  - Proof sketch: A tour of length at most  $k$  is a certificate.

# Computational Intractability

TSP: Travelling Salesperson

## Problem

TSP: Given a complete, weighted, directed graph  $G$  and an integer  $k$ , determine if there is a tour in the graph of total length at most  $k$ .

- Claim 1:  $\text{TSP} \in \text{NP}$ 
  - Proof sketch: A tour of length at most  $k$  is a certificate.
- Claim 2:  $3\text{-SAT} \leq_p \text{TSP}$

## Proof of Claim 2

- Claim 2.1:  $3\text{-SAT} \leq_p \text{HAMILTONIAN-CYCLE}$
- Claim 2.2:  $\text{HAMILTONIAN-CYCLE} \leq_p \text{TSP}$

## Problem

HAMILTONIAN-CYCLE: Given an unweighted, directed graph, determine if there is a Hamiltonian cycle in the graph.

- Hamiltonian cycle: A cycle that visits each vertex exactly once.

# Computational Intractability

TSP: Travelling Salesperson

## Problem

TSP: Given a complete, weighted, directed graph  $G$  and an integer  $k$ , determine if there is a tour in the graph of total length at most  $k$ .

## Problem

HAMILTONIAN-CYCLE: Given an unweighted, directed graph, determine if there is a Hamiltonian cycle in the graph.

- Hamiltonian cycle: A cycle that visits each vertex exactly once.
- Claim 2.2: HAMILTONIAN-CYCLE  $\leq_p$  TSP

## Proof of Claim 2.2

- Given an unweighted, directed graph  $G$ , construct the following complete, directed, weighted graph  $G'$ :
  - For each edge  $(u, v)$  in  $G$ , give the weight of 1 to edge  $(u, v)$  in  $G'$
  - For each pair  $(u, v)$  such that there is no edge from  $u$  to  $v$  in  $G$ , add an edge  $(u, v)$  with weight 2 in  $G'$
- Claim 2.2.1:  $G$  has a Hamiltonian cycle if and only if  $G'$  has a tour of length at most  $n$

# Computational Intractability

TSP: Travelling Salesperson

## Problem

TSP: Given a complete, weighted, directed graph  $G$  and an integer  $k$ , determine if there is a tour in the graph of total length at most  $k$ .

- Claim 1:  $\text{TSP} \in \text{NP}$ 
  - Proof sketch: A tour of length at most  $k$  is a certificate.
- Claim 2:  $3\text{-SAT} \leq_p \text{TSP}$

## Proof of Claim 2

- Claim 2.1:  $3\text{-SAT} \leq_p \text{HAMILTONIAN-CYCLE}$
- Claim 2.2:  $\text{HAMILTONIAN-CYCLE} \leq_p \text{TSP}$

## Problem

HAMILTONIAN-CYCLE: Given an unweighted, directed graph, determine if there is a Hamiltonian cycle in the graph.

- Hamiltonian cycle: A cycle that visits each vertex exactly once.

# Computational Intractability

TSP: Travelling Salesperson

- Claim 2.1:  $3\text{-SAT} \leq_p \text{HAMILTONIAN-CYCLE}$

## Proof of Claim 2.1

- Given an instance of the 3-SAT problem (a formula  $\Omega$  with  $n$  variables and  $m$  clauses), we need to create a directed graph  $G$  such that  $\Omega$  is satisfiable if and only if  $G$  has a Hamiltonian cycle.

# Computational Intractability

TSP: Travelling Salesperson

- Claim 2.1:  $3\text{-SAT} \leq_p \text{HAMILTONIAN-CYCLE}$

## Proof of Claim 2.1

- Given an instance of the 3-SAT problem (a formula  $\Omega$  with  $n$  variables and  $m$  clauses), we need to create a directed graph  $G$  such that  $\Omega$  is satisfiable if and only if  $G$  has a Hamiltonian cycle.
- Claim 2.1.1: If the 3-SAT formula is satisfiable, then there is a Hamiltonian cycle in the constructed graph.

# Computational Intractability

## TSP: Travelling Salesperson

- Claim 2.1:  $3\text{-SAT} \leq_p \text{HAMILTONIAN-CYCLE}$

### Proof of Claim 2.1

- Given an instance of the 3-SAT problem (a formula  $\Omega$  with  $n$  variables and  $m$  clauses), we need to create a directed graph  $G$  such that  $\Omega$  is satisfiable if and only if  $G$  has a Hamiltonian cycle.
- Claim 2.1.1: If the 3-SAT formula is satisfiable, then there is a Hamiltonian cycle in the constructed graph.
- Claim 2.1.2: If the constructed graph has a Hamiltonian cycle, then the 3-SAT formula has a satisfying assignment.

# Computational Intractability

## Hamiltonian Path

### Definition (Hamiltonian path)

A Hamiltonian path in any directed graph is a path that visits each vertex exactly once.

### Problem

HAMILTONIAN-PATH: Given a directed graph  $G$ , determine if there is a Hamiltonian path in the graph.

# Computational Intractability

## Hamiltonian Path

### Definition (Hamiltonian path)

A Hamiltonian path in any directed graph is a path that visits each vertex exactly once.

### Problem

HAMILTONIAN-PATH: Given a directed graph  $G$ , determine if there is a Hamiltonian path in the graph.

- Claim 1: HAMILTONIAN-PATH is NP-complete.

# Computational Intractability

## Hamiltonian Path

### Definition (Hamiltonian path)

A Hamiltonian path in any directed graph is a path that visits each vertex exactly once.

### Problem

HAMILTONIAN-PATH: Given a directed graph  $G$ , determine if there is a Hamiltonian path in the graph.

- Claim 1: HAMILTONIAN-PATH is NP-complete.

### Proof of Claim 1

- Claim 1.1: HAMILTONIAN-PATH  $\in$  NP

# Computational Intractability

## Hamiltonian Path

### Definition (Hamiltonian path)

A Hamiltonian path in any directed graph is a path that visits each vertex exactly once.

### Problem

HAMILTONIAN-PATH: Given a directed graph  $G$ , determine if there is a Hamiltonian path in the graph.

- Claim 1: HAMILTONIAN-PATH is NP-complete.

### Proof of Claim 1

- Claim 1.1: HAMILTONIAN-PATH  $\in$  NP
  - A Hamiltonian path acts as a certificate.

# Computational Intractability

## Hamiltonian Path

### Definition (Hamiltonian path)

A Hamiltonian path in any directed graph is a path that visits each vertex exactly once.

### Problem

HAMILTONIAN-PATH: Given a directed graph  $G$ , determine if there is a Hamiltonian path in the graph.

- Claim 1: HAMILTONIAN-PATH is NP-complete.

### Proof of Claim 1

- Claim 1.1: HAMILTONIAN-PATH  $\in$  NP
  - A Hamiltonian path acts as a certificate.
- Claim 1.2: HAMILTONIAN-PATH is NP-hard.
  - Claim 1.2.1: HAMILTONIAN-CYCLE  $\leq_p$  HAMILTONIAN-PATH

# Computational Intractability

## Hamiltonian Path

- Claim 1.2.1:  $\text{HAMILTONIAN-CYCLE} \leq_p \text{HAMILTONIAN-PATH}$

### Proof of Claim 1.2.1

- Consider the graph  $G'$  constructed from graph  $G$ .
- There is a Hamiltonian cycle in  $G$  if and only there is a Hamiltonian path in  $G'$ .

# Computational Intractability

## $k$ -COLORING

### Definition ( $k$ -colorable)

A graph is said to be  $k$ -colorable if it is possible to assign one of  $k$  colors to each node such that for every edge  $(u, v)$ ,  $u$  and  $v$  are assigned different colors.

### Problem

$k$ -COLORING: Given a graph  $G$ , determine if  $G$  is  $k$ -colorable.

Figure: Is this graph 2-colorable?

# Computational Intractability

## $k$ -COLORING

### Definition ( $k$ -colorable)

A graph is said to be  $k$ -colorable if it is possible to assign one of  $k$  colors to each node such that for every edge  $(u, v)$ ,  $u$  and  $v$  are assigned different colors.

### Problem

$k$ -COLORING: Given a graph  $G$ , determine if  $G$  is  $k$ -colorable.

Figure: Is this graph 2-colorable? Yes

### Definition ( $k$ -colorable)

A graph is said to be  $k$ -colorable if it is possible to assign one of  $k$  colors to each node such that for every edge  $(u, v)$ ,  $u$  and  $v$  are assigned different colors.

### Problem

$k$ -COLORING: Given a graph  $G$ , determine if  $G$  is  $k$ -colorable.

### Problem

2-COLORING: Given a graph  $G$ , determine if  $G$  is 2-colorable.

- How hard is the 2-COLORING problem?

# Computational Intractability

## $k$ -COLORING

### Definition ( $k$ -colorable)

A graph is said to be  $k$ -colorable if it is possible to assign one of  $k$  colors to each node such that for every edge  $(u, v)$ ,  $u$  and  $v$  are assigned different colors.

### Problem

$k$ -COLORING: Given a graph  $G$ , determine if  $G$  is  $k$ -colorable.

### Problem

2-COLORING: Given a graph  $G$ , determine if  $G$  is 2-colorable.

- How hard is the 2-COLORING problem?
  - 2-COLORING  $\in P$  since  $G$  is 2-colorable if and only if  $G$  is bipartite and we know an efficient algorithm for checking if a given graph is bipartite.

### Definition ( $k$ -colorable)

A graph is said to be  $k$ -colorable if it is possible to assign one of  $k$  colors to each node such that for every edge  $(u, v)$ ,  $u$  and  $v$  are assigned different colors.

### Problem

$k$ -COLORING: Given a graph  $G$ , determine if  $G$  is  $k$ -colorable.

### Problem

3-COLORING: Given a graph  $G$ , determine if  $G$  is 3-colorable.

- How hard is the 3-COLORING problem?

### Definition ( $k$ -colorable)

A graph is said to be  $k$ -colorable if it is possible to assign one of  $k$  colors to each node such that for every edge  $(u, v)$ ,  $u$  and  $v$  are assigned different colors.

### Problem

$k$ -COLORING: Given a graph  $G$ , determine if  $G$  is  $k$ -colorable.

### Problem

3-COLORING: Given a graph  $G$ , determine if  $G$  is 3-colorable.

- How hard is the 3-COLORING problem?
- Claim 1: 3-COLORING is NP-complete.

### Problem

3-COLORING: Given a graph  $G$ , determine if  $G$  is 3-colorable.

- Claim 1: 3-COLORING is NP-complete.

### Proof of Claim 1

- Claim 1.1: 3-COLORING is in NP
  - A short certificate is a 3-coloring of the graph.
- Claim 1.2: 3-SAT  $\leq_p$  3-COLORING

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Consider the following gadget. There is a bijection between colors and truth values.

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- How we encode a clause, say  $(\bar{x}_1 \vee x_2 \vee x_3)$ .

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.1: There is no 3 coloring of the graph below with nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $F$  color.

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : T, x_2 : T, x_3 : T$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : F, x_2 : T, x_3 : T$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : T, x_2 : F, x_3 : T$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : T, x_2 : T, x_3 : F$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : F, x_2 : F, x_3 : T$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : T, x_2 : F, x_3 : F$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.2: There is a 3 coloring of the graph below with at least one of the nodes  $\bar{x}_1, x_2$ , and  $x_3$  assigned  $T$  color.
  - $\bar{x}_1 : F, x_2 : T, x_3 : F$

# Computational Intractability

## 3-COLORING

- Claim 1.2:  $3\text{-SAT} \leq_p 3\text{-COLORING}$

### Proof ideas for Claim 1.2

- Claim 1.2.3: The given formula is satisfiable if and only if the constructed graph has a 3 coloring.

# Computational Intractability

## NP-complete problems

### SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

### SCHEDULING

Given  $n$  jobs with start time  $s_i$  and duration  $t_i$  and deadline  $d_i$ , determine if all the jobs can be scheduled on a single machine such that no deadlines are missed.

- Claim 1: SUBSET-SUM  $\in$  NP

# Computational Intractability

## NP-complete problems

### SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

### SCHEDULING

Given  $n$  jobs with start time  $s_i$  and duration  $t_i$  and deadline  $d_i$ , determine if all the jobs can be scheduled on a single machine such that no deadlines are missed.

- Claim 1: SUBSET-SUM  $\in$  NP
- Claim 2: SCHEDULING  $\in$  NP

# Computational Intractability

## NP-complete problems

### SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

### SCHEDULING

Given  $n$  jobs with start time  $s_i$  and duration  $t_i$  and deadline  $d_i$ , determine if all the jobs can be scheduled on a single machine such that no deadlines are missed.

- Claim 1: SUBSET-SUM  $\in$  NP
- Claim 2: SCHEDULING  $\in$  NP
- Claim 3: SUBSET-SUM  $\leq_p$  SCHEDULING

# Computational Intractability

## NP-complete problems

### SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

### SCHEDULING

Given  $n$  jobs with start time  $s_i$  and duration  $t_i$  and deadline  $d_i$ , determine if all the jobs can be scheduled on a single machine such that no deadlines are missed.

- Claim 1: SUBSET-SUM  $\in$  NP
- Claim 2: SCHEDULING  $\in$  NP
- Claim 3: SUBSET-SUM  $\leq_p$  SCHEDULING

### Proof sketch for Claim 3

Given an instance of the subset sum problem  $(\{w_1, \dots, w_n\}, W)$ , we construct the following instance of the Scheduling problem:  $((0, w_1, S + 1), \dots, (0, w_n, S + 1), (W, 1, W + 1))$ . We then argue that there is a subset that sums to  $W$  if and only if the  $(n + 1)$  jobs can be scheduled. Here  $S = w_1 + \dots + w_n$ .

# Computational Intractability

## Many-one reduction

- Most of the polynomial-time reductions  $X \leq_p Y$  that we have seen are of the following general nature: We give an efficient mapping from instances of  $X$  to instances of  $Y$  such that “yes” instances of  $X$  map to “yes” instances of  $Y$  and “no” instances of  $X$  map to “no” instances of  $Y$ .
- Such reductions have special name. They are called **many-one** reductions.

# Computational Intractability

## Many-one reduction

- Most of the polynomial-time reductions  $X \leq_p Y$  that we have seen are of the following general nature: We give an efficient mapping from instances of  $X$  to instances of  $Y$  such that “yes” instances of  $X$  map to “yes” instances of  $Y$  and “no” instances of  $X$  map to “no” instances of  $Y$ .
- Such reductions have special name. They are called **many-one** reductions.

### Many-one reduction

In order to show that  $X \leq_p Y$  we design an efficient mapping  $f$  from the set of instances of  $X$  to set of instances of  $Y$  such that  $s \in X$  iff  $f(s) \in Y$ .

# Computational Intractability

NP-complete problems: 3D-Matching

## 3D-MATCHING

Given disjoint sets  $X$ ,  $Y$ , and  $Z$  each of size  $n$ , and given a set  $T$  of triples  $(x, y, z)$ , determine if there exist a subset of  $n$  triples in  $T$  such that each element of  $X \cup Y \cup Z$  is contained in exactly one of these triples.

**Figure:** Let  $T = \{(a, x, p), (a, y, p), (b, y, q), (c, z, r)\}$ . Does there exist a 3D-Matching?

# Computational Intractability

NP-complete problems: 3D-Matching

## 3D-MATCHING

Given disjoint sets  $X$ ,  $Y$ , and  $Z$  each of size  $n$ , and given a set  $T$  of triples  $(x, y, z)$ , determine if there exist a subset of  $n$  triples in  $T$  such that each element of  $X \cup Y \cup Z$  is contained in exactly one of these triples.

- Claim 1: 3D-MATCHING  $\in$  NP.

# Computational Intractability

NP-complete problems: 3D-Matching

## 3D-MATCHING

the previous slide

**Figure:** Example construction for  $(x_1 \vee \bar{x}_2 \vee x_3), (\bar{x}_1 \vee x_2 \vee \bar{x}_3)$ .  $k$  denotes the number of clauses.

# Computational Intractability

NP-complete problems: Subset-sum

## SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

- Claim 1: SUBSET-SUM  $\in$  NP.

# Computational Intractability

NP-complete problems: Subset-sum

## SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

- Claim 1: SUBSET-SUM  $\in$  NP.
- Claim 2: SUBSET-SUM is NP-complete.

NP-complete problems: Subset-sum

## SUBSET-SUM

Given natural numbers  $w_1, \dots, w_n$  and a target number  $W$ , determine if there is a subset  $S$  of  $\{1, \dots, n\}$  such that  $\sum_{i \in S} w_i = W$ .

- Claim 1: SUBSET-SUM  $\in$  NP.
- Claim 2: SUBSET-SUM is NP-complete.
  - Claim 2.1: 3D-MATCHING  $\leq_p$  SUBSET-SUM.
  - Proof sketch: We will show an efficient many-one reduction. Given an instance  $(X, Y, Z, T)$  of the 3D-MATCHING problem, we construct an instance of the SUBSET-SET problem.
    - We first construct a  $3n$ -bit vector. Given a triple  $t_i = (x_1, y_3, z_5)$ , we construct the following vector  $v_i$ :
